1 ****DIR** -XML² - unambiguous access to XML-based business documents in B2B e-commerce**

Christian Huemer

October 2001 **Proceedings of the 3rd ACM conference on Electronic Commerce**Full text available: pdf(184.35 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

XML-based vocabularies have become more and more popular in application-to-application exchanges. Like traditional EDI standards, XML-based formats require an additional agreement on rules to access XML-based data structures. It is our goal to define a machine-readable format for these agreements to accompany XML DTDs or schemas. We present our approach by using a simplified state machine to define access rules. The semantics of the state machine will be expressed by the means of XML itself to b ...

Keywords: B2B e-commerce, EDI, UN/EDIFACT, XML, ebXML, xCBL

2 **Data management issues in electronic commerce: Conceptual modeling and specification generation for B2B business processes based on ebXML**

HyoungDo Kim

March 2002 **ACM SIGMOD Record**, Volume 31 Issue 1Full text available: pdf(457.97 KB) Additional Information: [full citation](#), [abstract](#), [references](#)

In order to support dynamic setup of business processes among independent organizations, a formal standard schema for describing the business processes is basically required. The ebXML framework provides such a specification schema called BPSS (Business Process Specification Schema) which is available in two stand-alone representations: a UML version, and an XML version. The former, however, is not intended for the direct creation of business process specifications, but for defining specificatio ...

3 **Managing the software design documents with XML**

Junichi Suzuki, Yoshikazu Yamamoto

September 1998 **Proceedings of the 16th annual international conference on Computer documentation**Full text available: pdf(1.09 MB) Additional Information: [full citation](#), [references](#), [index terms](#)
Keywords: CASE data interchange, UML, XML, software model interchange

4 Designing XML vocabularies with UML (poster session)

David A. Carlson

January 2000 **Addendum to the 2000 proceedings of the conference on Object-oriented programming, systems, languages, and applications (Addendum)**

Full text available:  [pdf\(22.46 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

The tools and processes used to design XML vocabularies (DTD or XML Schema) are generally different from those used for application design using UML. In addition, large XML vocabularies are often difficult to understand and communicate with business users. This research summary describes the use of UML class diagrams for modeling XML vocabularies and generating XML Schemas from the UML.

5 A semantic network-based design methodology for XML documents

Ling Feng, Elizabeth Chang, Tharam Dillon

October 2002 **ACM Transactions on Information Systems (TOIS)**, Volume 20 Issue 4

Full text available:  [pdf\(285.64 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

The eXtensible Markup Language (XML) is fast emerging as the dominant standard for describing and interchanging data among various systems and databases on the Internet. It offers the Document Type Definition (DTD) as a formalism for defining the syntax and structure of XML documents. The XML Schema definition language, as a replacement for the DTD, provides more rich facilities for defining and constraining the content of XML documents. However, it does not concentrate on the semantics that und ...

6 Business-to-business interactions: issues and enabling technologies

B. Medjahed, B. Benatallah, A. Bouguettaya, A. H. H. Ngu, A. K. Elmagarmid

May 2003 **The VLDB Journal — The International Journal on Very Large Data Bases**, Volume 12 Issue 1

Full text available:  [pdf\(558.34 KB\)](#) Additional Information: [full citation](#), [abstract](#), [index terms](#)

Business-to-Business (B2B) technologies pre-date the Web. They have existed for at least as long as the Internet. B2B applications were among the first to take advantage of advances in computer networking. The Electronic Data Interchange (EDI) business standard is an illustration of such an early adoption of the advances in computer networking. The ubiquity and the affordability of the Web has made it possible for the masses of businesses to automate their B2B interactions. However, several issues ...

7 Querying web distributed databases for XML-based E-businesses: requirement analysis, design, and implementation

Hiroshi Ishikawa, Manabu Ohta

January 2001 **Proceedings of the 12th Australasian conference on Database technologies**

Full text available:  [pdf\(850.81 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)
 [Publisher Site](#)

Electronic Commerce (EC) business models like e-brokers on the Web use XML databases such as product and customer data. To flexibly model such applications, we need a modeling language for EC businesses, that is, business processes. To this end, we have

adopted a query language approach to modeling and have designed a query language for distributed XML databases called XBML suitable for EC businesses. In this paper, we discuss the requirements for an XML query language for supporting EC business ...

8 KM-4 (knowledge management): distributed knowledge management: Towards smarter documents

Vikas Krishna, Prasad M. Deshpande, Savitha Srinivasan

November 2004 **Proceedings of the Thirteenth ACM conference on Information and knowledge management**

Full text available:  [pdf\(224.70 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Document analysis research typically focuses on document image understanding or classic problems in text classification, clustering, summarization and discovery. While that is an important aspect of document management, in practice, documents lifecycles are often determined by the context of the business process that they are relevant to. It therefore becomes necessary for the document analysis techniques to recognize and leverage the contextual information provided by a supporting schema and ...

Keywords: classification, content, processes, workflow

9 Industrial practice 2: B2B integration over the Internet with XML: RosettaNet successes and challenges

Suresh Damodaran

May 2004 **Proceedings of the 13th international World Wide Web conference on Alternate track papers & posters**

Full text available:  [pdf\(474.19 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

The practical experience of RosettaNet in using Web technologies for B2B integration illustrates the transformative power of Web technologies and also highlights challenges for the future. This paper provides an overview of RosettaNet technical standards and discusses the lessons learned from the standardization efforts, in particular, what works and what doesn't. This paper also describes the effort to increase automation of B2B software integration, and thereby to reduce cost.

Keywords: B2B integration, PIP, XML, business process, messaging services

10 Modeling Web application architectures with UML

Jim Conallen

October 1999 **Communications of the ACM**, Volume 42 Issue 10

Full text available:  [pdf\(146.85 KB\)](#) Additional Information: [full citation](#), [references](#), [citations](#), [index terms](#)
 [html\(39.12 KB\)](#)

11 Manufacturing applications: Neutral information structure for manufacturing simulations: a neutral information model for simulating machine shop operations

Y. Tina Lee, Charles McLean, Guodong Shao

December 2003 **Proceedings of the 35th conference on Winter simulation: driving innovation**

Full text available:  [pdf\(348.20 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#)

Small machine shops typically do not have the resources to develop custom simulations of their operations or data translators to import their data from other manufacturing software applications. This paper presents an overview of an information model currently under development at the National Institute of Standards and Technology (NIST) to address this problem. The model provides neutral data interfaces for integrating machine shop software applications with simulation. The information model ...

12 Process and workflow management: Introducing eservices in business process models

Lerina Aversano, Gerardo Canfora

July 2002 **Proceedings of the 14th international conference on Software engineering and knowledge engineering**Full text available:  [pdf\(249.37 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

The need for automatic support of business processes that extend over the boundaries of an enterprise is a recognized need of emerging virtual organizations. To make workflow technologies useful during the enactment of business processes involving many partners that reciprocally provide and consume services, it is important to provide a model, and supporting technologies, to manage the introduction of services in workflow models. This paper introduces a framework for the introduction of eServices ...

Keywords: eservices, process models, workflow management**13 A case for test-code generation in model-driven systems**

Matthew J. Rutherford, Alexander L. Wolf

September 2003 **Proceedings of the second international conference on Generative programming and component engineering**Full text available:  [pdf\(283.86 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

A primary goal of generative programming and model-driven development is to raise the level of abstraction at which designers and developers interact with the software systems they are building. During initial development, the benefits of abstraction are clear. However, during testing and maintenance, increased distance from the implementation can be a disadvantage. We view test cases and test harnesses as an essential bridge between the high-level specifications and the implementation. As such, ...

14 Web technologies and applications (WTA): WebUml: reverse engineering of web applications

Carlo Bellettini, Alessandro Marchetto, Andrea Trentini

March 2004 **Proceedings of the 2004 ACM symposium on Applied computing**Full text available:  [pdf\(681.13 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#)

Web applications have become complex and crucial for many firms, especially when combined with areas such as CRM (Customer Relationship Management) and BPR (Business Process Reengineering). Since then the scientific community has focused attention to Web application design, development, analysis, testing, by studying and proposing methodologies and tools. This paper describes an automatic tool for the construction of UML models from existing Web applications. This tool, named WebUml, generates c ...

15 DDD papers: Software factories: assembling applications with patterns, models, frameworks and tools

Jack Greenfield, Keith Short

October 2003 **Companion of the 18th annual ACM SIGPLAN conference on Object-oriented programming, systems, languages, and applications**Full text available:  [pdf\(707.51 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

The confluence of component based development, model driven development and software product lines forms an approach to application development based on the concept of software factories. This approach promises greater gains in productivity and predictability than those produced by incremental improvements to the current paradigm of object orientation, which have not kept pace with innovation in platform technology. Software factories promise to make application assembly more cost effective thro ...

Keywords: design patterns, domain-specific languages, model-driven development, software factories, software product lines

16 Hypermedia documentation: Documenting software systems with views IV: documenting web transaction design with UWAT+

Damiano Distanto, Scott Tilley, Shihong Huang

October 2004 **Proceedings of the 22nd annual international conference on Design of communication: The engineering of quality documentation**

Full text available:  [pdf\(202.39 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

This paper describes an approach to documenting the conceptual design of Web Transactions using UWAT+. A Web Transaction is a collection of serial and/or parallel activities that contributes to achieving a user-oriented business objective using a Web-based application. UWAT+ is a meta-model for describing the various aspects of a Web Transaction in a holistic manner. It is an extension of the Transaction Design Model that is part of the Ubiquitous Web Applications (UWA) framework, a comprehensive ...

Keywords: UWAT+, business processes, documentation, software views, transaction design, web applications

17 Understanding users II: A qualitative assessment of the efficacy of UML diagrams as a form of graphical documentation in aiding program understanding

Scott Tilley, Shihong Huang

October 2003 **Proceedings of the 21st annual international conference on Documentation**

Full text available:  [pdf\(274.99 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

Graphical documentation is often characterized as an effective aid in program understanding. However, it is an open question exactly which types of graphical documentation are most suitable for which types of program understanding tasks (and in which specific usage contexts). The Unified Modeling Language (UML) is the de facto standard for modeling modern software applications. This paper describes an experiment to assess the qualitative efficacy of UML diagrams in aiding program understanding. ...

Keywords: Unified Modeling Language (UML), assessment, graphical documentation, program understanding

18 First European workshop on XML and knowledge management best papers: A Java-based framework to support computer-assisted creation of structured XML documents

Andrea Trentini

April 2002 **ACM SIGAPP Applied Computing Review**, Volume 10 Issue 1

Full text available:  [pdf\(1.00 MB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

In the management of document-based information, the structure of the document itself is very important. In the XML world you can use a DTD (Document Type Definition) or XMLSchema to define that structure. But not everything can be described (and forced) through a DTD while XMLSchema is not yet widely supported. For our MENTOR project - a document-based university management system - we needed a tool to support the creation and storage of official-meeting transcripts. These documents are strongly ...

Keywords: DTD, XML, XMLSchema, document architecture, document object model

19 Integrating and customizing heterogeneous e-commerce applications

Anat Eyal, Tova Milo

August 2001 **The VLDB Journal — The International Journal on Very Large Data Bases**, Volume 10 Issue 1

Full text available:  [pdf\(286.63 KB\)](#) Additional Information: [full citation](#), [abstract](#), [index terms](#)

A broad spectrum of electronic commerce applications is currently available on the Web, providing services in almost any area one can think of. As the number and variety of such applications grow, more business opportunities emerge for providing new services based on the integration and customization of existing applications. (Web shopping malls and support for comparative shopping are just a couple of examples.) Unfortunately, the diversity of applications in each specific domain and the dispar ...

20 [The Evaluation of Large, Complex UML Analysis and Design Models](#)

May 2004 **Proceedings of the 26th International Conference on Software Engineering**

Full text available:  [pdf\(309.46 KB\)](#)

Additional Information: [full citation](#), [abstract](#)

 [Publisher Site](#)

This paper describes techniques for analyzing largeUML models. The first part of the paper describesheuristics and processes for creating semantically correctUML analysis and design models. The second part of thepaper briefly describes the internal DesignAdvisorresearch tool that was used to analyze Siemens models.The results are presented and some interestingconclusions are drawn.
